This is the written version of a talk given at the Second International Symposium on Non-Conventional Energy Technology in Atlanta, Georgia, February 10, 1983. It is based entirely on the theory and experimental work of Dr. William J. Hooper, BA, MA, PHD. in Physics from the University of California, Berkley, and formerly Professor Emeritus at Principia College, Elsau, IL.

PREFACE

From 1968 to 1971, my husband, Warren W. Gibson, financed the research of Dr. William J. Hooper. I worked with Dr. Hooper as secretary and laboratory assistant. He explained his theory and the intent of each experiment to me as the work progressed. I was personally present when every experiment was performed during this time.

After Dr. Hooper passed on in 1971, I tried to perform an experiment with a vacuum tube generator which he had designed. On my first attempt I burned out the tube, and with that I lost confidence in my ability to do the research on my own.

I satisfied my desire to continue the work with the publication and sale of his manuscript, and with the hope that it would spark an interest in someone who would want to carry on the research. There has been much interest expressed in his theory and research, but to my knowledge there is no one presently continuing the work.

Many people who have read Dr. Hooper's manuscript have asked for more experimental data. This paper includes that information.
